Dear Hiring Team,

I am excited to apply for the N/A role at N/A. With 13 years of experience building scalable, user-focused applications across international environments, I deliver solutions that combine performance, reliability, and thoughtful system design.

As a Senior Full-Stack Software Engineer, I focus on creating maintainable, scalable solutions that deliver real value to users. I continue to maintain and improve a long-standing e-commerce platform I developed over 10 years ago, implementing performance optimizations, feature enhancements, and secure, reliable systems. **User experience is always central to my work**, ensuring applications are efficient, robust, and intuitive. My approach emphasizes practical system design, clean code, and long-term maintainability, keeping projects adaptable as requirements evolve.

Key achievements:

- Designed and delivered a robust e-commerce platform with Symfony and React, end-to-end ownership, meeting strict budget constraints, featuring dynamic product configurators and an automated PDF quote generator.
- Enhanced the security of a credit insurance information system (Java EE / Oracle PL/SQL) following a penetration test, ensuring full compliance and operational reliability.
- Designed and implemented a distributed SaaS platform for social network analysis with Elasticsearch, Node.js (Express), and Angular, handling all layers—from infrastructure to UI and delivering actionable insights from large-scale data.
- Published two papers on online social network analysis, presented at ASONAM 2016, demonstrating commitment to innovation and data-driven solutions.

My expertise spans system design, software architecture, and full-stack development, with hands-on experience in React, Node.js, Spring Boot, Symfony, PostgreSQL / Oracle, MongoDB, Elasticsearch, AWS, Terraform, microservices, and Docker. I enjoy exploring new technologies and applying them thoughtfully to improve productivity and code quality.

I am particularly motivated by **collaborative problem-solving**. I thrive when working with a team to tackle complex challenges and value the feeling of being part of a group driving results together.t

I would welcome the opportunity to discuss how my skills and collaborative mindset can help drive impactful solutions at N/A. You can reach me at
romain@giovanetti.fr to schedule a conversation.

Thank you for your consideration.

Best regards,
Romain Giovanetti
